GENTRAL INTELLIGENCE AGENCY

## INFORMATION REPORT

This material contains information affecting the National Defense of the United States within the meaning of the Espionage Laws, Title 18, U.S.C. Secs. 793 and 794, the transmission or revelation of which in any manner to an unauthorized S-E-C-R-E-T person, is applicated by law.

THE SOURCE EVALUATIONS IN THIS REPORT ARE DEFINITIVE.  THE APPRAISAL OF CONTENT IS TENTATIVE.  (FOR MEY SEE MEYERS)  1. The East German Reichsbahn Regyn flatours have six axios and an 80-ton load capacity. Experience Industrial that these flatours travel heavy on the roadbed.  A decision was made to limit the maximum number of R Ryn cars to fifteen in one train.  A normal teain in East Germany is usually made up of 40 or 50 freight or other care. A train of 15 Ryn flatours cannot exceed 55 km. per hour as its maximum speed. This speed has to be reduced greatly on curves because of the poor center of gravity of the R Ryn flatours.  Comment: Reported as received; probably should read RRyn.
REQUIREMENT NO. RD  ACQUIRED  THE SOURCE EVALUATIONS IN THIS REPORT ARE DEFINITIVE.  THE APPRAISAL OF CONTENT IS TENTATIVE.  (FOR REY SEE SEVERSE)  1. The East German Reichsbahn ReRyn flatcars have six axios and an 80-ton load capacity. Experience Remarks that these flatcars travel heavy on the roadbed.  A decision was made to limit the maximum number of R Ryn cars to fifteen in one train.  A normal train in Bast Germany is usually made up of 40 or 50 freight or other cars. A train of 15 R Ryn flatcars cannot exceed 55 km. per hour as its maximum speed. This speed has to be reduced greatly on surves because of the poor center of gravity of the R Ryn flatcars.
This is UNEVALUATED Information  The Source evaluations in this report are definitive.  The Appraisal of content is tentative.  (FOR MEY SEE MEVERSE)  1. The East German Reichsbahn R. Ryn flatcars have six axios and an 80-ton load capacity. Experience submediate that these flatcars travel heavy on the roadbed.  A decision was made to limit the maximum number of R Ryn cars to fifteen in one train.  A normal train in East Germany is usually made up of 40 or 50 freight or other cars. A train of 15 R Ryn flatcars cannot exceed 55 km. per hour as its maximum speed. This speed has to be reduced greatly on euryes because of the poor center of gravity of the R Ryn flatcars.
This is UNEVALUATED Information  THE SOURCE EVALUATIONS IN THIS REPORT ARE DEFINITIVE.  THE APPRAISAL OF CONTENT IS TENTATIVE.  (FOR MEY SEE MEVERSE)  1. The East German Reichsbahn R. Ryn flatcars have six axis and an 80-ton load capacity. Experience interest that these flatcars travel heavy on the roadbed.  A decision was made to limit the maximum number of R Ryn cars to fiftoen in one train.  A normal train in East Germany is usually made up of 40 or 50 freight or other cars. A train of 15 R Ryn flatcars cannot exceed 55 km. per hour as its maximum speed. This speed has to be reduced greatly on curves because of the poor center of gravity of the R Ryn flatcars.
The source evaluations in this report are definitive.  The Appraisal of content is tentative.  (FOR MEY SEE MEVERSE)  1. The East German Reichsbahn Regyn flatoars have six axios and an 80-ton load capacity. Experience submentation that these flatoars travel heavy on the roadbed.  A decision was made to limit the maximum number of R Ryn cars to fiftoen in one train.  A normal train in East Germany is usually made up of 40 or 50 freight or other cars. A train of 15 R Ryn flatoars cannot exceed 55 km. per hour as its maximum speed. This speed has to be reduced greetly on eurves because of the poor center of gravity of the R Ryn flatoars.
THE SOURCE EVALUATIONS IN THIS REPORT ARE DEFINITIVE.  THE APPRAISAL OF CONTENT IS TENTATIVE.  (FOR MEY SEE MEVERSE)  1. The East German Reichsbahn Re Ryn flatoars have six axios and an 80-ton load capacity. Experience subsequence that these flatoars travel heavy on the roadbed.  A decision was made to limit the maximum number of R Ryn cars to fifteen in one train.  A normal train in East Germany is usually made up of 40 or 50 freight or other cars. A train of 15 R Ryn flatoars cannot exceed 55 km. per hour as its maximum speed. This speed has to be reduced greatly on curves because of the poor center of gravity of the R Ryn flatoars.
The East German Reichsbahn Right flatoars have six axis and an 80-ton load capacity. Experience resimplifies that these flatoars travel heavy on the roadbed.  A decision was made to limit the maximum number of R Ryn cars to fifteen in one train.  A normal train in East Germany is usually made up of 40 or 50 freight or other cars. A train of 15 R Rym flatoars cannot exceed 55 km. per hour as its maximum speed. This speed has to be reduced greatly on curves because of the poor center of gravity of the R Rym flatoars.
on the roadbed.  A decision was made to limit the maximum number of R Ryn cars to fifteen in one train.  A normal train in East Germany is usually made up of 40 or 50 freight or other cars. A train of 15 R Ryn flatears cannot exceed 55 km. per hour as its maximum speed. This speed has to be reduced greatly on curves because of the poor senter of gravity of the R Ryn flatears.
on the roadbed.  A decision was made to limit the maximum number of R Ryn cars to fifteen in one train.  A normal train in East Germany is usually made up of 40 or 50 freight or other cars. A train of 15 R Ryn flatears cannot exceed 55 km. per hour as its maximum speed. This speed has to be reduced greatly on curves because of the poor senter of gravity of the R Ryn flatears.
on the roadbed.  A decision was made to limit the maximum number of R Ryn cars to fifteen in one train.  A normal train in East Germany is usually made up of 40 or 50 freight or other cars. A train of 15 R Ryn flatears cannot exceed 55 km. per hour as its maximum speed. This speed has to be reduced greatly on curves because of the poor senter of gravity of the R Ryn flatears.
on the roadbed.  A decision was made to limit the maximum number of R Ryn cars to fifteen in one train.  A normal train in East Germany is usually made up of 40 or 50 freight or other cars. A train of 15 R Ryn flatears cannot exceed 55 km. per hour as its maximum speed. This speed has to be reduced greatly on curves because of the poor senter of gravity of the R Ryn flatears.
